

AMTA Session on Antenna Measurements and RCS – Lars Foged

The session will cover the most relevant topics on Antenna and RCS Measurements. This includes recent developments in standardization, status, and progress in near and far field measurements techniques. It also includes progress and overview of the characterization of radiating systems for 5G, that represent an exciting challenge and an important opportunity for the antenna measurement community.

The purpose of the session is to attract local industry as participants/lecturers combined with selected lecturers from the vast AMTA community. The target audience are people at all levels with an interest in antenna measurements and techniques. The format is a mix of tutorials/reviews and scientific papers.
